

Brant Lake Association Friends and Neighbors,

The BLA would like to provide you with an update on the proposal to use ProcellaCOR as part of the Eurasian Water Milfoil (EWM) control plan in Brant Lake.

The initial proposal was to secure the necessary permits from NYSDEC and the APA for the spring of 2023. Realizing that we would not be able to meet our targeted treatment date, we are taking several actions. Specifically, the NYSDEC permit application has been withdrawn and the APA permit process has been inactivated. These actions give the Brant Lake community additional opportunities to participate in the informational meetings that are being scheduled this summer (2023). The dates will be announced soon.

The issue of EWM in Brant Lake is very serious and needs immediate attention. Nothing reinforces this more than the December 2021 NYSDEC downgrade of Brant Lake's water quality to "impaired waterway" status. You can visit the BLA website at www.brantlakeassoc.org for more information and updates.

Please stay engaged. Together we can make a difference.

John Dunn, President
Brant Lake Association
